

## Peer Review Response

We received a lot of good and necessary feedback from the Timeline team. We will start of with the things that we thought were helpful and needed changing:

1. **“Some unused branches, and links that refer to other branches from the main one.”**
  - a. We have since deleted unused branches. Issue #54
2. **“Some links in README.md and Scope.md are broken.”**
  - a. The links have been fixed and are now working. Issue #55
3. **“Search by Point, Display River Network and Display Drainage Basin usecases dont seem to be fully implemented for the iteration 3 deadline. Flow of events cannot be followed or the usecases themselves should be changed.”**
  - a. They are now fully implemented. Issue #56
4. **“Error/Exception messages are clear, but only displayed in console. They should be displayed on the web page too.”**
  - a. The error messages are now displayed also on the console. Issue #57
5. **“Doing a strip() for Laiuskraadid and Pikkuskraadid fields would be nice, currently any whitespace causes an error.”**
  - a. This bug has been fixed.

There were also some points raised that we thought taking action was not necessary:

1. **“Can’t find release notes and requirements in the documentations.”**
  - a. There is a separate subheading on our Github page that is titled “Releases”. All the current and past releases are accessible from there. Additionally, the requirements are in the “Project” tab which is linked in the README.md
2. **“A link to [DTM\\_5m\\_eesti.tif](#) should be in DOCKER\_instructions.md. Currently this file is referenced but no link is provided.”**
  - a. Response
3. **“Most issues dont have any commits in their history.”**
  - a. Very valid issue but now that 95% of the work is done, it is unreasonable to link issues to previous commits. We will do a better job of linking them in the future.

## ***The original peer review document.***

### **Documentation**

- A link to [DTM\\_5m\\_eesti.tif](#) should be in DOCKER\_instructions.md. Currently this file is referenced but no link is provided.
- Can't find release notes and requirements in the documentations.
- Some unused branches, and links that refer to other branches from the main one.
- Some links in README.md and Scope.md are broken.
- Most issues don't have any commits in their history.

### **Acceptance test**

- Search by Point, Display River Network and Display Drainage Basin usecases don't seem to be fully implemented for the iteration 3 deadline. Flow of events cannot be followed or the usecases themselves should be changed.
- Error/Exception messages are clear, but only displayed in console. They should be displayed on the web page too.
- Doing a strip() for Laiuskraadid and Pikkuskraadid fields would be nice, currently any whitespace causes an error.

### **Installation test**

- Building and running the docker container was easy and straight forward, since they have a good instruction.

### **Code review**

- The code itself is clean and understandable with appropriate comments.
