

Peer Review of InterVUE by the HydroCalc team

Documentation

- It took me a little time to find the necessary documentation to understand what the team is trying to solve.
- The README.md includes a nice overview of the necessary functions of the application.
- The commits have links to the issues that were solved with that commit.

Acceptance tests

- The CI pipeline looks like it is broken.
- The core use cases are nicely covered and working.

Installation test

- Accessing the AWD, building and running the docker container was easy.

Code Review

- The code is clean and understandable.
- Code is nicely commented. As a sign of good programming, it is understandable even without them.
